

## How to Reduce Compressor Maintenance Expense

With air compressor applied in more and more fields, its maintenance cost arouses the users' more attention. There are many aspects need to improve to solve the problem of high maintenance cost, and the main methods as follows:

1). Confirm the maintenance company. You'd better choose the original manufacture and adopt the original spare parts.

2). Improve screw compressor working condition. Please use non-woven fabrics at all air vents to do the pre-filtering, that can prevent dust from entering. Because dust can damage all valves, cooler etc. Moreover, it also affects valves action, heat dissipating effects, filtering units service life, oil quality etc.

Take precautions to do preventive maintenance. Please do your best to find the problem that will appear before machine breaking down.
